# MAS 90 MAS 200

Client/Server  
Client/Server for SQL Server

## WITH .ORDER YOUR CUSTOMERS CAN:

- Obtain item information and customer specific pricing
- Place orders with established terms, or other payment method
- Pay for purchases with a credit card\*
- Receive e-mail acknowledgements of orders placed
- Request the addition of new ship-to-addresses
- Check on the status of orders and invoices with the .inquiry applet

*\*Automated processing of credit card transactions requires the Credit Card Processing module, which is sold separately*

## E-BUSINESS MANAGER .ORDER APPLET

The image shows two screenshots of the .order applet interface. The top screenshot is a 'Confirm Shopping Cart Submission' page in a Microsoft Internet Explorer browser. It displays a table of items in the cart:

Item Number	Item Description	Quantity	Unit Price	Extension
1061-HON-H252	HON 2 DRAWER LETTER FLE W/O LK	5	81.48	407.40
2568-3-25	DESK FILE 3 1/2" CAP 25	5	12.56	62.80
8953	UNIVERSAL 3 1/2" SSDD FLEX DSK	10	4.45	44.50

Below the table, it shows 'Bill To' and 'Ship To' information for American Business Futures, Suite 100, Accounting Department, Milwaukee, WI 53205-1204, United States. It also lists terms, payment method (MasterCard), and shipping details.

The bottom screenshot shows a product page for 'Furniture' in the same browser. It features a search bar, a list of furniture items, and a 'Shopping Cart' summary. The cart summary shows 1 item for a total amount of 407.40. The product list includes:

- HON 2 DRAWER LETTER FLE W/O LK: Availability: Quantity Available, Usually ships in 3 to 5 days. Price: 84.00
- HON 2 DRAWER LETTER FLE W/ LCK: Availability: Ships in 1 to 2 days. Price: 87.00
- HON 4 DRAWER LETTER FLE W/O LK: Availability: Quantity Available, Ships in 1 to 2 days. Price: 131.00

As the Internet becomes the method of choice for transacting business worldwide, an ever-increasing number of your customers will expect the ability to place orders for products and services online. The .order applet for the e-Business Manager module brings this functionality to Best Software's MAS 90 family of products.

The .order applet provides a business-to-business solution that offers your customers the ability to place orders directly into your MAS 90 or MAS 200 system through your Web site — twenty-four hours a day.

Designed as an applet for the e-Business Manager module, .order integrates into your MAS 90 system, provides the potential to significantly improve customer service levels by offering customers the capability to place orders and check the status of their account at their discretion. The implementation of .order can increase the accuracy of orders placed into your system, and can reduce operating expenses by allowing the customer to place their own orders without administrative and sales support.

The .order applet includes many powerful standard features that provide you with great benefits at a very affordable price.

*Please note: Designed for use in conjunction with the e-Business Manager module.*

## MAS 90 and MAS 200 e-Business Manager .order applet

*“The e-Business Manager module has opened doors for us across the board. Once you start installing the new technology, you suddenly realize how much more it’s possible to do.”*

*Kerry Thornhill, CEO  
Colgin Companies*

### FEATURES:

#### Products and Services Inquiry

The Products and Services Web pages provide the ability to view the items available for purchase, which are organized into user-defined categories. These categories make it easy for your customer to find items without having to know the actual item number. Upon selection of an individual item, it displays the image associated with the item (along with the price and description), and allows the item to be added to the shopping cart. The page automatically displays any special customer pricing and/or quantity break pricing you have set up in MAS 90 or MAS 200.

#### Products Search

On the Products and Services Inquiry page, the product search feature can also find items. This allows your customers to search by item number, item description or customer item number. Search options give the ability to search by the criteria “begins with,” “contains” or “ends with.”

#### Ship-to Inquiry

When creating a shopping cart order, your customer can view existing ship-to addresses for their company and select the correct address for this order. They can also request a new ship-to address. To keep your security intact, the MAS 90 or MAS 200 e-Business Manager administrator must accept any new ship-to address before it can be put to use.

#### Display Shopping Cart

After adding items to the shopping cart, either from the Products and Services Inquiry or from any of the drill downs in the .inquiry applet, selecting “View Shopping Cart” displays the selected items with quantities, prices, billing and shipping addresses, sales tax, and freight information.

#### Submit Shopping Cart

Pressing the “Accept” button displays a confirmation page. This performs credit limit checking and a customer on-hold verification process. A link is available to select a different ship-to code or view sales tax detail.

#### E-mail Notifications

Decide to send e-mail notifications to the customer, salesperson, and a user of your choice whenever:

- Your customer successfully submits a shopping cart.
- You accept or reject an Internet order.
- You ship an Internet order.

#### Customization

Control the look and feel of your site with numerous options from within MAS 90 or MAS 200. Specify the text or images to use for navigation options and user selections.

#### User-Defined Fields

Specify customer and inventory item user-defined fields for use with e-Business Manager. User-defined fields may be placed on the Web templates with an HTML or text editor.

#### Item Attachments

Attach multiple files to your inventory items for use on the Web. Attachments can be any document type and can be used for purposes such as marketing literature, warranty information, material safety data sheets, etc.

#### Order Management

When orders are placed, they can flow directly into the Sales Order module, or can be placed in an approval queue for manual acceptance before creating sales orders.
