ADP® and Sage Intacct:

Bringing your HR and financial solutions together

By employing this smart technology, you can:

- Help eliminate inefficiencies
- Enhance staff productivity
- Enable company flexibility for the future
- Improve the quality of reporting and analytics, with less error from manual entry

With ADP and Sage Intacct as your partners, you can focus on your people and support your business objectives while reducing administrative chores and compliance challenges.

When you lack integration between your ERP and HCM systems, your business processes can slow down due to manual data entry. Your HR and finance staff are likely spending many hours a week re-keying or searching for important human capital management (HCM) data among multiple systems, forcing more strategic activities to take a back seat.

ADP – one of the world's most innovative, comprehensive global providers of cloud-based HCM solutions – and Sage Intacct – a leading provider of best-in-class cloud ERP software – have joined forces to help simplify your back-office processes and remove obstacles by helping you sync employee data and post payroll entries from ADP Workforce Now® to your Sage Intacct General Ledger.

Rather than duplicating time, dimension values, payroll and expense reimbursement data into two systems, information can now be securely shared between ADP and Sage Intacct with a few clicks of your mouse - dramatically reducing the chance for errors and saving significant time and effort.
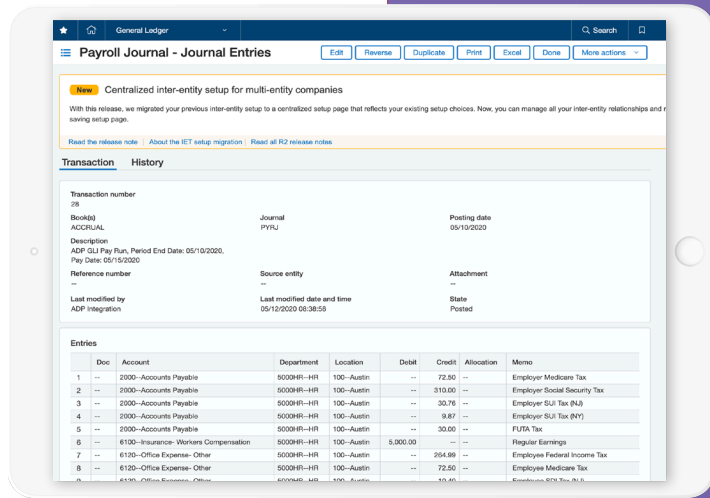

Streamlining the flow of information between your HCM and ERP applications can result in less time spent on administrative tasks and more time spent on the people who help your business grow and thrive.

Features and Workflows:

- **Employee Data** – Pushes employee changes entered in ADP Workforce Now to Sage Intacct Contact and Employee Records

- **Expense Reimbursements** – Complete 360 integration and record keeping of expense report data and reimbursements between Sage Intacct and ADP Workforce Now

- **General Ledger Data** – Pushes journal entries from ADP Workforce Now General Ledger Interface into Sage Intacct General Ledger

- **Inbound Time** – Pulls timesheet data from Sage Intacct Time & Expenses into ADP Workforce Now® Essential Time

- **Outbound Time** – Pushes timecard data from ADP Workforce Now® Essential Time to Sage Intacct Time & Expense

- **Dimensions Sync** – Pulls dimension values from Sage Intacct to ADP Workforce Now® Essential Time
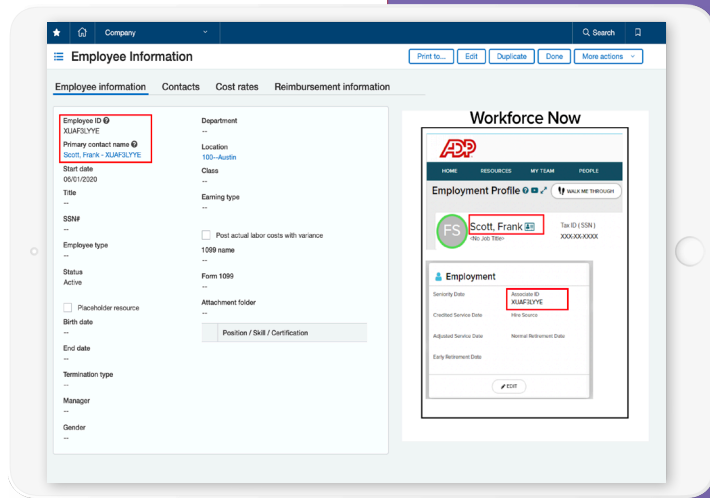

Enhance the quality of your reporting needs:

Payroll journal entries are passed from ADP's General Ledger Interface system following a payroll cycle, including dimensions which enhances the quality of reporting.

Integrate HR data into your financial systems:

Take employee information and add it to your business management processes: employee ID, name, address, email, department, location, pay rate, reports to manager and more.

Gain control over your employees time data:

Manage the data in the system of record that you prefer and then pull or push time entries and dimensions to gain business process efficiencies.
